

METHOD STATEMENT

SHEET VINYL INSTALLATION

Area is cleaned and prepared.

Measurements are made and lines are struck to attain even distribution and minimal waste of sheet vinyl over the floor space;

An approved adhesive is then applied to the floor and allowed partly to dry;

From a right angle to the setting, the sheet vinyl is then laid in a tessellated pattern across the main area until the body is complete;

The outer perimeter edge is then filled with the required cuts;

The finished floor is then rolled to ensure through contact is made with the adhesive.

10a) Tools Required

Stanley Knife, Gluing Trowel/ and Roller, Tape Measure, String Line (First Aid Boxes On Site)

RISK ASSESSMENT

Minimal, as protection provided;

Possible cut from Stanley Knife.
